Subject: Delmarva Power RFP

I read the 6/12 News Journal article story summarizing Connectiv's Petition for Rehearing and Reconsideration which was filed with the PSC with incredulity! With this filing Connectiv has shown its arrogance and disdain for the democratic process in a way that should immediately preclude any further action by the PSC on the petition... except denial.

Connectiv, Delmarva Power and NRG all had the same opportunity to develop and submit a RFP for windpower at the time that Bluewater Wind did so... it is way past midnight! Let's get on with the task of providing Delaware with a source of clean, sustainable and economically stable electricity generation.

As a private citizen, I very much appreciated the fair and open process which the Public Service Commission heard our concerns regarding this whole process. Please continue to move forward responsibly with the decision to make Bluewater Wind the primary new energy source for Delaware with a backup gas plant in Sussex county. Connectiv's petition is just another attempt to delay a progressive move toward clean, efficient energy production! They should have shown their ability to lead when the RFP was initiated over a year ago: now they need to GET OUT OF THE WAY!!

Please file a copy of this email in the public record and forward it to each Commissioner and the other Agencies involved in the decision making process.

Thank you, Patricia W. Frey
